3. Architectural Subsystem Breakdown

Technical specifications and module breakdown of each architectural tier in the codebase.

A. Frontend Client Subsystem (`/client`)

Framework & Tooling: React 18, Vite Bundler, Tailwind CSS 3, PostCSS, Lucide Icons, Axios.
Key Directories & Modules:
• `src/pages/Admin/AdminPages/` - Radiologist portal for MRI ingestion, multi-plane slice viewer, automated diagnosis report compilation (`AdminUploads.jsx`, `Admin_SendReport_Saves.jsx`).
• `src/pages/User/UserPages/` - Patient consultation and history dashboard (`UserSaves.jsx`, `UserUploads.jsx`).
• `src/components/FileUploader/` - Drag-and-drop batch directory & multi-plane DICOM/image uploader (`FileUploader.jsx`, `MultipleFolder.jsx`).
• `src/context/auth.jsx` - Global JWT / session context for authentication and role-based access control.

B. Backend Server Subsystem (`/server`)

Framework & ML Engine: Python 3.10+, Flask REST API, PyTorch, TorchVision (MRNet), PyMongo, NumPy, Pillow.
Core Implementation Files:
• `server/app.py` (34.8 KB) - Core REST gateway handling user auth, ABHA ID patient record linking, MRI file ingestion, and multi-model inference pipelines.
• `server/torch_utils.py` (4.3 KB) - PyTorch MRNet deep convolutional network loader and inference utility predicting ACL tears, Meniscus tears, and Abnormalities across Axial, Coronal, and Sagittal planes.
• `server/mongo_config.py` - Database connector establishing authenticated MongoDB persistence for scans and diagnostic reports.
• `server/retrive.py` - Patient record queries, historical diagnostic report generation, and aggregation.
• `server/abhaData.py` - Ayushman Bharat Health Account (ABHA) demographic verification and data lookup.

C. Containerization & Orchestration

Docker Environment:
• `docker-compose.yml` - Multi-container orchestration binding frontend, Flask backend, and MongoDB service on isolated networks.
• `client/Dockerfile.client` - Frontend container build spec.
• `server/Dockerfile.server` - Flask & PyTorch GPU/CPU server container spec.

4. Environment & Repository Artifacts Summary

Virtual Environment (`venv/`)	Contains **24,539 files** comprising the Python 3 runtime, PyTorch 2.x, TorchVision, NumPy, SciPy, Pillow, Flask, and Werkzeug distribution packages. Omitted from standard source tree to maintain clarity.
Git Metadata (`.git/`)	Contains **28 version control objects**, commit history, refs, and branch metadata.
